

ZRX Migration Guide

From ZWCAD+ to ZWCAD 2017

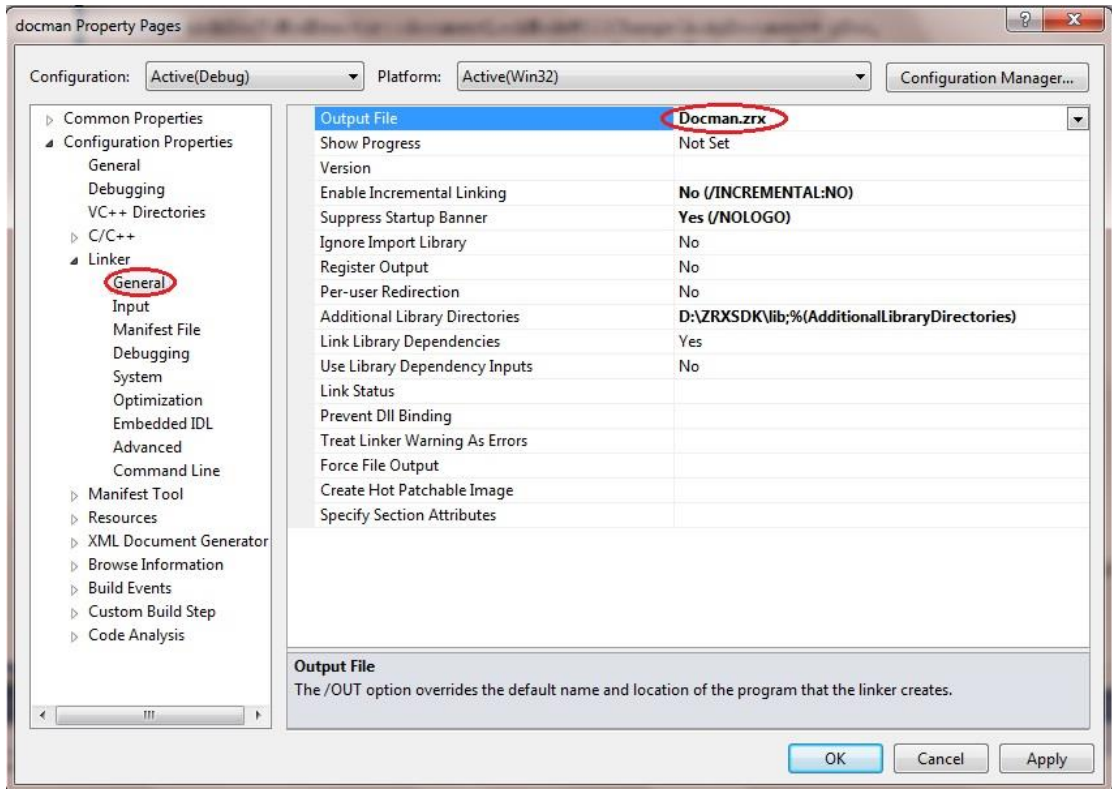

Migration Steps:

Note: Please use Visual Studio 2010 to build ZRX programs for ZWCAD2017. The file structure of ZRXSDK for ZWCAD 2017 is almost the same as the one for ZWCAD+, the only different is we will provide different libraries for 32bits and 64bits Windows. However, in this beta version ZWCAD 2017 only provide 32bits version, which can run on both 32bits and 64bits Windows, so the zrx files compiled with 32bits libraries can also work on 32bits and 64bits Windows.

1. Redirect the “Additional Include Directory” to ZRXSDK for ZWCAD 2017.

2. Redirect the “Additional Library Directories” to ZRXSDK for ZWCAD 2017, and change the folder name from “lib” to “lib-Win32”.

Different between ZRX 2015 and ZRX 2017

1. If you use services (**AcRxService**) in your program, please make sure the registry (**acrRegisterService**) cannot be called before **acrBuildClassHierarchy** is called.
2. The registry key storing "Support File Path" for ZWCAD 2017 is change to "ZWCADSEARCHPATH", while it is "ZWCAD" in ZWCAD+.
3. In the latest version ZWCAD 2017 do not support VBA and .NET APIs.
