

dotNET Migration_Manual

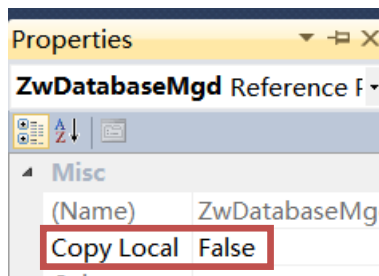

1. Open your solution with Visual Studio 2010, change project property [Compile->Advanced Compile Options->Target framework (all configurations)] to .NET Framework 4.

2. In the References tab, replace the references to "acdbmgd.dll" and "acmgd.dll" with "ZwDatabaseMgd.dll" and "ZwManaged.dll", which are in ZWCAD installation directory.

Then change the property "Copy Local" of ZwDatabaseMgd and ZwManaged to False.

3. If your project references to "Autodesk.AutoCAD.Interop" and "Autodesk.AutoCAD.Interop.Common", replace them with "ZWCAD.exe"
4. In your code, replace all the namespaces "Autodesk.AutoCAD.Interop" and "Autodesk.AutoCAD.Interop.Common" with "ZwCAD", and replace all the namespaces "Autodesk.AutoCAD.xxxx" with "ZWSoft.ZwCAD.xxxx".
5. If you use some objects named like Acadxxxx(for example, AcadLine), rename them as Zcadxxxx.
6. Then you can build your solution and use "netload" in ZWCAD to load your compiled dll file.
